

Thank you for downloading *Sales Organizer*

*Sales Organizer* is an excellent point of sales. You will be amazed how it is easy to manage your inventory, your invoicing, your customers, etc. Here, you will spend your time selling your products not wondering how to control it. You got on hand version "b". It features a much more productive "Invoicing" data base. Don't miss it!

*Sales Organizer* is a set of databases created with FileMaker Pro. For those who have FileMaker, you can get a \$60 rebate when purchasing *Sales Organizer*. This solution works without FileMaker Pro. This POS performs various tasks. Here are some examples:

- Management of invoicing and customer.
- Inventory control.
- Calculation of receipts of the day.
- Calculation of receipts per day, per week, per month and per year.
- Statement control (the customers who are late in their bill payments)
- Calculation of the profit margin, the revenue, the value of the current inventory.
- Management of the staff on a personal and a occupational level.
- Produce reports for each department
- Supplier management
- Fac simile transmissions
- Produce order forms
- Produce forms for products to be returned

You can count on *Sales Organizer* to be reliable and accurate. The version that you just downloaded into your computer is completely functional. However, a message will appear on the invoice and reports cannot be printed. In the "Invoicing" database, the tax is calculated as if you were an American citizen. Modifications can be made to meet standards for the citizens of other states, provinces & countries. *Sales Organizer* exists also in French, in French Canadian, in English Canadian and in Spanish.

If you would like to have information, buy, make modifications, add new functions to the databases, contact me at: **gestabusiness@usa.net** Visit also my web site: **<http://go.to/gestabusiness>**

When you buy *Sales Organizer*, you will receive in the user manual and a link to download your version.

Please note: **Never move the databases out of the folder.** These files are linked. Their functioning would be jeopardized.

Macintosh users: *Sales Organizer* used the Helvetica font (true type only). Remove post script Helvetica fonts out of the folder. Hard drive folder > System folder > Font folder > Helvetica folder. Select the post script fonts. Drag them in another folder.

Windows users: *Sales Organizer* uses the Arial font (true type). You might see some titles appear bigger than expected.

Your satisfaction is my number one priority.  
Laurier Levesque
