Intelligent Systems

Recognized as a leader in our industry, we've installed over 15,000 intelligent systems worldwide. Highly satisfied Ontel users know our

reliable, low-cost systems and support have been the solution to their OEM problems and needs. Broad in-depth experience, our unique hardware design and very

extensive software are a proven and tested combination for success.

Software

The key to our many successful installations is our broad range of complete system and application programs fully supported by

our software and systems group.

These programs include: operating systems . . . word processing . . . OP/L . . . multi terminal network . . .

Word Processing

Ontel's unique design combines a terminal display which is easy to read with special hardware which

communication and terminal emulation programs . . . intelligent data entry . . . Basic/2 . . . Fortran . . . diagnostic programs.

enables fast screen manipulations. It is highly suitable for a secretarial environment. Easy to operate, the WORD system provides today's

secretary with the ability to produce original dictation, form letters, forms, contracts, mailing lists and financial statements.

The depth of Ontel's development and application tools provides assurance of timely software development

and effective equipment usage. Ontel provides a complete Business Accounting Package and a Financial Planning Package.

All system software is state of the art and provides capabilities previously available only in larger mini computer systems.

Hardware

The OP-1 system incorporates an unique structure which combines up to 64K of memory and up to three microprocessors: Central Processing Unit, Display and

I/O microprocessors. Its modular structure makes possible terminal networks that range from basic interactive keyboards operating on-line to a host

computer . . . intelligent data entry stations . . . text editing or word processing work stations . . . to full remote batch systems.

New Products

Dynamic research and development enables the company to continue growth as a leader in its field.

Based on the proven Ontel OP-1/64 user programmable terminal system, the new OP1/50 offers a low cost approach to data and word processing.

I would like to have more information about Ontel intelligent systems.
