PRODUCT MIX CHART

With the acquisition of Pertec's customer base, we have the most complete line of data capture systems in the industry. We can offer either the diskette (UDS-2000) or key-to-disk (PDE-5) to the price conscious user who needs a small cluster of keystations.

The very large user can have cluster of up to 64 keystations with our PDE 1800 MOD I and MOD II systems. For the user who needs a mix of standalone distributed processing and professional data capture we start with the 1900 CADE (without COBOL I/O) and go up to the XL/40 and 1900/10 (with COBOL I/O, more memory, more disks, etc.).

Never before have we (and you) been in such an enviable competitive position. We have the products, support and pricing to take on any competitor and come out a winner!
