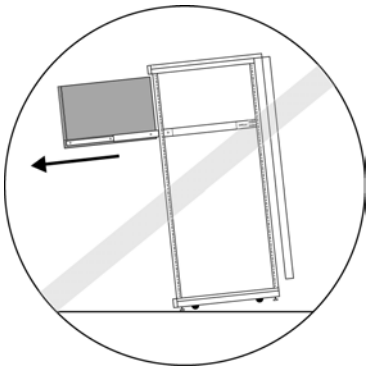
hp rack system stability information

Designed and built to the highest HP quality standards, HP Rack Systems deliver leading edge protection in the simplest form. Ease of integration, installation, and use characterizes all HP Rack Systems.

cabinet stability

Rack optimized servers from many manufacturers extend on sliders to ease upgrades and maintenance. The shift in weight can cause a rack to tip if the proper precautions are not used.



anti-tip feet

Included with every HP rack is a front and rear anti-tip foot to reduce the risk of cabinet instability. Additionally, proper installation of the anti-tip feet is required before installing or servicing any device in your HP Rack System.

tie-together kits

Multiple racks may be tied together to create a continuous data center rack space. HP tie-kits can be used in lieu of the anti-tip feet to reduce the amount of floor space used. More information about HP tie-kits can be found at http://www.hp.com/racksolutions
