

HP solutions for Microsoft Exchange Server 2003

A breakthrough in performance and cost efficiency

Messaging is intrinsic to your enterprise, providing essential communications and collaboration capabilities that drive productivity, efficiency, and agility.

Now suppose you could ...

- Maximize return on investment through server consolidation
- Improve availability and enhance security
- Increase productivity with HP iPAQ Pocket PC, Tablet PC or notebook mobile devices
- Migrate with minimal impact in the fastest and safest way

What if you really could do more-with less?

You can. By migrating to Microsoft® Exchange Server 2003 on an industry-standard HP platform, your information workers can be more productive and efficient.

As a Worldwide Prime Integrator for Microsoft Exchange, HP is uniquely qualified to deliver a complete messaging solution, deployed on:

- Industry-leading HP ProLiant servers
- HP StorageWorks hardware, software and infrastructure
- Innovative Windows®-enabled HP desktops, notebooks, and wireless clients

HP Services offers a comprehensive suite of services from planning and design, through implementation and integration, to ongoing technical and business support. As a result, you gain an intelligent, reliable, and highly adaptable environment for messaging and collaboration.

Make your move to Exchange Server 2003

If you're using Exchange 5.5, or Exchange Server 2000, you can get more out of your investments and reduce costs by migrating to Exchange Server 2003 on an industry-standard HP platform.

HP servers are optimized for Microsoft Exchange Server 2003. HP Services make it easy to migrate by using best-of-breed tools and vast experience gained from deploying more than 14 million Exchange seats. Pre-tested HP server configurations for Exchange Server 2003 streamline the migration process, accelerating your time to benefits.

Reduce costs by consolidating Exchange servers

HP ProLiant server consolidation simplifies management requirements, adds flexibility and reduces the operating cost of your Exchange environments. ProLiant BL, DL and ML servers provide a highly reliable, cost-effective server consolidation solution. HP ProLiant Essentials Workload Management Pack (WMP) is a software solution that controls and dynamically allocates system resources. Now it's easy to change the number of processors dedicated to any particular task, based on time or utilization rules. A recent study on the Exchange Server Market by *Windows & .NET Magazine* in Association with Up2Right Consulting concluded that 54 percent of all Exchange implementations run on ProLiant servers. ProLiant servers, in combination with HP StorageWorks products, enhance the capabilities of Exchange Server 2003 for more intelligent utilization of server and storage resources.

Maximize availability and security

The broad range of ProLiant servers easily handle the demands of global Exchange users—from server blades and rack servers, to 8-way servers and high-availability clusters. By deploying Exchange Server 2003 using HP ProLiant cluster solutions, you ensure high availability for your messaging applications. HP StorageWorks hardware and software products work seamlessly with Microsoft

environments, so you can store, manage, protect, and access your messaging data reliably and securely.

Simplify management with built-in intelligence

HP builds intelligent manageability into ProLiant servers to maximize reliability and flexibility, while minimizing administrative costs. Using ProLiant Essentials Integrated Lights-Out tools, administrators can install, configure, monitor, update, and troubleshoot ProLiant servers remotely using a standard web browser.

Gain an enhanced, untethered user experience

Empower your mobile workers and boost productivity with secure, real-time access to the critical information they need. HP delivers an optimized messaging environment that dramatically improves performance over the network, wired or wireless. With innovative wireless Windows-enabled client devices, such as the Compaq Tablet PC and HP iPAQ Pocket PC, Exchange Server 2003 users gain fast, reliable, wireless access to messaging and collaboration applications.

“HP Services consultants clearly had the first-hand experience we needed. We know we'll migrate to Exchange 2003 as soon as it's available.”

Nigel Stevens, PhD, vice president of information systems and technology, Reed Elsevier

Ensure your success with proven Exchange expertise

HP Services maximizes the value of your Exchange Server 2003 solution with over 850 consultants trained and certified on Exchange. Our global team of 23,000 Microsoft-trained specialists and 5,000-plus Microsoft-certified engineers can assist you from planning and design, through migration and consolidation to ongoing management support.

With HP, you get an unparalleled level of expertise to maximize the long-term value of your messaging solution.
