

Compaq *iPAQ* BlackBerry Handheld
wireless e-mail solution for Lotus Domino

Cool solutions, cool products

COMPAQ

BLACKBERRY

Would you like to have wireless access to your e-mail — anytime, anywhere? Now you can.

The *iPAQ™* BlackBerry™ Handheld is the secured and seamless wireless e-mail solution from Compaq, the leader in enterprise messaging solutions. This innovative solution is designed specifically for corporate environments using Lotus Domino. It's a manageable, cost effective enterprise solution for organizations looking to boost the productivity of mobile users with a valuable productivity tool.

Powerful bundle

The Compaq wireless bundle for Lotus Domino — which is ideal for pilot or full-scale deployment — includes software, hardware and services, and can be easily ordered through Compaq DirectPlus. Standard configurations include the following:

- > Compaq *ProLiant™* ML330 server
- > Microsoft Windows NT Server 4.0 or Windows 2000 Server
- > BlackBerry Enterprise Server software
- > Nationwide coverage and flat-rate pricing
- > Compaq *iPAQ* BlackBerry Handheld wireless devices
- > Installation and Startup Services

BlackBerry Enterprise Server software

With BlackBerry Enterprise Server software, you can bring the benefits of wireless e-mail to your mobile users. The BlackBerry Enterprise Server monitors the mailboxes of all BlackBerry users in your organization. Each time a new message arrives in a user's mailbox, the BlackBerry Enterprise Server forwards an encrypted copy of the message to the user's handheld device.

The BlackBerry Enterprise Server addresses critical corporate requirements regarding remote e-mail access, including:

- > Centralized administration of users and servers — The BlackBerry Enterprise Server's user and server administrative tools fully integrate with Lotus Domino.
- > Scalability and reliability — A single BlackBerry Enterprise Server can support hundreds of BlackBerry Handheld users.
- > Performance monitoring — The BlackBerry Enterprise Server Alert provides constant monitoring and notification of BlackBerry Enterprise Server performance.
- > Security — BlackBerry software uses Triple DES encryption. E-mail messages remain encrypted and confidential at all points between the user's mailbox and their Compaq *iPAQ* BlackBerry Handheld.

Compaq *iPAQ* BlackBerry Handheld wireless e-mail solution

Powerful wireless handheld device with connected organizer

The *iPAQ* BlackBerry Handheld is based on a 32-bit Intel386 processor, and includes a wireless modem, integrated e-mail/organizer software and PC docking cradle. Creating and retrieving information is amazingly simple using the optimized keyboard, thumb-operated trackwheel, easy-to-read backlit screen and intuitive menu-driven interface. The *iPAQ* BlackBerry Handheld is also a full-featured connected organizer — complete with calendar, address book and task list — that automatically synchronizes with the user's desktop Personal Information Management software when placed in its docking cradle.

Nationwide coverage and flat-rate pricing

The BlackBerry solution operates over the BellSouth Intelligent Wireless Network in the United States and the Rogers AT&T wireless data network in Canada. Roaming service between Canada and the U.S. is available as an optional service. Both networks offer broad coverage, nationwide roaming, and fast and reliable delivery of business critical e-mails — at an affordable cost.

BlackBerry Enterprise Server Software Installation and Startup Service

The Installation and Startup Services include:

- > Preparation of the BlackBerry Enterprise Server on the Compaq *ProLiant* ML330 server
- > Installation and Startup Service of the BlackBerry Enterprise Server for up to 250 users
- > Brief orientation for the system administrator with pointers to applicable support

Compaq *iPAQ* BlackBerry Handheld wireless e-mail solution hardware/software list
