NAME

ppmap - pattern package text formatter

SYNOPSIS

ppmap <u>\<patfilename></u> <u>\<filename></u>

DESCRIPTION

<u>Ppmap</u> outputs the text area of a reversed compiled pattern in a
formatted form.

The argument <u>\<patfilename></u> is the name of a pattern file to be
used by the pattern matcher, **ppmatch**(), to match on.

The argument <u>\<filename></u> is the name of a file containing the text
to be formatted.

FILES

```
/usr/include/ppsubs.h       pattern package header file
/usr/include/sys/types.h    types header file
/usr/include/sys/stat.h     stat structure header file
/usr/include/errfct.h       error function header file
```

SEE ALSO

ppmkpat(1L), **ppvpat**(1L), **ppmatch**(3L), **pattern**(5L)

DIAGNOSTICS

The diagnostics produced are intended to be self-explanatory.
