**WRITESEG(a)**

**NAME**

writeseg — force a segment to be written back

**SYNOPSIS**

(writeseg = 10.)  
writeseg (segnum)

**DESCRIPTION**

The writeback bit is set on the segment id indexed by *segnum*. A value of 1 is returned from C.

**ALSO SEE**

**DIAGNOSTICS**

C returns -1 if the *segnum* points to a null segment table entry. Fault return with code 10 if *segnum* exceeds the available number of segment table entries.
